

# DOMEL

## ENVIRONMENTAL POLICY

A clean, well-maintained and healthy environment is our greatest treasure, just like the jobs provided by companies in the Domel Group. We wish to preserve all of this through the principles of sustainable development, to improve this, and preserve it for future generations. All employees are responsible for continually acting in an environmentally-friendly manner.

### WE CARRY OUT AND DEMONSTRATE THIS BY:

- keeping abreast of and adhering to legal requirements, customers and other requirements that Domel has agreed to fulfil and are linked to environmental aspects;
- training and communicating to raise the environmental awareness of all employees and others who work for or on behalf of Domel;
- systematically identifying, reducing, preventing and removing the negative environmental impacts of our activities;
- actively reducing greenhouse gas emissions by implementing various measures, including the use of renewable energy sources and improving energy efficiency;
- developing and producing environmentally-friendly products, where priority is given to materials and technologies that use natural resources efficiently and reduce energy consumption, including through the use of recycled materials;
- being aware of the importance of biodiversity and being committed to responsible treatment of the environment that contributes to its conservation;
- communicating and working effectively with the local community, administrative offices, and other interested parties.
